

CastClearTM

Worm deterrent and soil penetrant

LIQUID

A nutrient based unique blend of worm deterrent and soil penetrants contains:

More than 5% amino nitrogen
More than 15% organic sulphur

CastClear is a unique combination of nutrient materials that have been clearly shown to reduce worm-cast levels on sports turf. Close scientific evaluation has shown that this new product does not kill worms or reduce populations, but does deter worms from travelling through treated soils. It is unique in using a surfactant system that moves the nutrient into the upper soil structure and fixes it there providing good persistence of deterrent effect until breaking down to natural nutrients absorbed by plant roots. It can be used with absolute safety from first tiller formed on new seeds at low rates of application, and year round on established turf. Maximum Single Application rate is **20l/Ha**, but a programme of **7l/Ha** applications every **10 to 20 days** will produce best results. Apply in a minimum of **250l/Ha** of water.

NB: Do not acidify or condition the water used to apply this product or it will not work, and do not tank mix with products known to reduce the pH of the spray water.

SHAKE WELL BEFORE USE
