

DewDrop

Dew dispersant

LIQUID

DewDrop is a non-scorching surfactant that binds to the wax on the leaf surface and causes moisture droplets to run off the leaf as they form. Dewdrop also decreases the time the leaf takes to dry following rainfall, and is ideal for use on any turf where dry foliage is desired.

- Reduces leaf surface moisture, suppressing formation of dew
- Leaf dries quicker following rain or irrigation
- Less moisture reduces disease pressure
- Frost is less damaging
- Cost saving compared to manual dew removal
- Easy and safe to the grass & operator

Application rate is 20L/Ha in a minimum of 300L/Ha of water. Use from September to March inclusive, not more than two applications per month.

Safety Precautions:

Use in accordance with COSHH assessment when handling chemical or exposed to spray.

- | | |
|--------|--|
| R22 | Harmful if swallowed |
| R36/38 | Irritating to eyes/skin |
| R41 | Risk of serious damage to the eyes |
| R53 | May cause long-term adverse effects in the aquatic environment |
