

Maxicrop

Maxicrop Fine Turf Fertiliser

Maxicrop Concentrate contains 24% soluble seaweed solids and is suitable for use on all lawns and turf areas as a growth stimulant. It can also be used where it is desirable to minimise pesticide or fertilizer inputs and has Soil Association approval.

- Enhances root growth, helping turf to maximise uptake of nutrients & moisture
- Boosts the number of beneficial soil microbes, helping maintain a healthy root zone
- Increases chlorophyll levels, helping to maintain turf health & appearance
- Increases shoot density for improved turf recovery & ground cover
- Enhances recovery from stress conditions such as drought, cold, mowing, foot traffic etc.
- Boosts the plant's natural health mechanism, helping maintain turf health
- Enhances establishment of young seeds and turf

Apply Maxicrop Concentrate every 4 weeks @ 10 litres per ha
(1 litre per 1000 sq.metres)

Maxicrop Concentrate can be tank mixed with other inputs such as fertilisers and fungicides where required.
