

NEOSOREXA®
GOLD

Contains 0.005% w/w difenacoum

READY-TO-USE-BAIT
For the control of rats and mice

**STATUTORY CONDITIONS RELATING TO USE
FOR USE ONLY AS AN AMATEUR RAT AND MOUSE KILLER
For use indoors and outdoors.**

PREVENT ACCESS TO BAIT by children, birds and non-target animals particularly dogs, cats, pigs and poultry.

DO NOT PLACE BAIT where food, feed or water could become contaminated.

AVOID ALL CONTACT BY MOUTH.

HARMFUL TO WILDLIFE.

Search for and remove rodent bodies at frequent intervals during treatment. Collect and dispose of the remains of bait and any remaining rodent bodies after treatment. All waste should be double-bagged using bin liners or similar before disposal in a bin with a secure lid to prevent accidental poisoning of dogs, cats, birds, foxes and other wildlife or by contacting either a specialist contractor or the Local Authority where waste bins are not provided. Do not dispose of in any other way.

READ ALL PRECAUTIONS BEFORE USE

PCS94647
(HSE8301)

Neosorexa Gold contains 'fortec', which enhances palatability, is highly efficacious, increases initial interest in the bait, and enhances natural feeding behaviour (by encouraging foraging activity).

DIRECTIONS FOR USE

Neosorexa Gold is a palatable all purpose rodenticide based on the advanced anticoagulant, difenacoum. Equally effective against mice and rats, it controls strains resistant to some other anticoagulants. Two or more feeds are required to produce a delayed mortality (4-10 days): most rodents die in their burrows out of sight. Before laying bait, thoroughly explore the site to locate centres of infestation, runways and burrows.

RATS: Place 100-200g bait in a good number of dry locations throughout the infested area, near burrows, on runways and where droppings are seen. Out of doors bait should be covered to prevent access by children, animals and birds. Use covers constructed from drainpipes, open-ended boxes, or sheets of metal or wood, secured at an angle against a wall.

MICE: Place 20-30g bait at many points where there are signs of activity such as droppings, gnawing or tracks. Mice are sporadic feeders and many small baits, 1-2 metres apart, are essential. Protect baits as indicated. Inspect baits frequently, particularly in the first ten days, replacing eaten bait. If a bait point is completely consumed, the quantity should be increased. Continue replenishing baits until they are left untouched. Wild mammals and birds may be at greater risk if this product is not used in accordance with the label. Neosorexa Gold contains Bitrex to help prevent accidental human consumption.

PRECAUTIONS

WASH HANDS AND EXPOSED SKIN before meals and after use.

STORE IN ORIGINAL CONTAINER, tightly closed, in a safe place.

EMPTY CONTAINER COMPLETELY and dispose of safely.

IF YOU FEEL UNWELL, seek medical advice (show the label where possible).

NOTE TO DOCTOR

Difenacoum is an indirect anticoagulant. Phytomenadione, Vitamin K1, is antidotal. Determine prothrombin times not less than eighteen hours after consumption. If elevated, administer Vitamin K1 in divided doses. Continue until prothrombin time normalises. After withdrawal of the antidote, continue determination of prothrombin time for two weeks and resume treatment if elevation occurs in that time. NB Vitamin K3 is not effective. This product is approved under The Control of Pesticides Regulations, 1986 (as amended) for use as directed. HSE8301

Bitrex is a registered Trade Mark of MacFarlan Smith, Edinburgh.

Contains 0.005% w/w difenacoum.

READY TO USE BAIT

Neosorexa® Gold – the first bait employing fortect technology – includes a balance of foraging grain pellets of a clearly different size, colour, shape, texture and taste mixed with the cut wheat. Meaning greater palatability and greater appeal to rats and mice.
