

Going into the autumn months, it is important to give your lawn the best preparation to see it through the winter in the best condition possible. This pack will do just that by providing a valuable top up of nutrients for your lawn.

Autumn Maintenance Tips

Remove fallen leaves: Fallen leaves will create a canopy which will block sunlight, trap moisture and increase the chances of disease and appearance of moss. Removal of leaves should be done regularly with a rake.

Remove any moss: Treating the moss with iron will blacken the moss and allow easier removal. Our Autumn & Winter fertiliser contains a high percentage of iron to aid with this.

Aerate and scarify: This will remove any thatch and debris in the grass and help to loosen up compacted soil.

Overseed: In a particularly dry summer, you may lose some grass. Overseeding in the autumn (we'd recommend September) will help to thicken up your lawn and fill any patchy areas. **IMPORTANT:** Ensure 6 weeks have passed between seeding and applying autumn fertiliser.

Visit progreen.co.uk to shop **grass seed** to assist you in your maintenance this autumn.

A1Lawn Ultimate Autumn & Winter Lawn Fertiliser

2.5kg (covers up to 100m²)

This fertiliser gives your lawn the nutrients it needs to stay strong and healthy through the colder months.

Key benefits:

High potassium strengthens roots and stems during autumn and winter.

Added iron supports chlorophyll production, helping the lawn stay a rich green.

How to apply:

Spread evenly at 25-35g/m², ideally using a spreader for the best coverage (hand-spreading is fine - just aim for even distribution).

For best results, apply before rain so the granules wash into the soil.

If it doesn't rain within 24 hours, water the lawn daily until the granules dissolve to avoid scorching.

Apply from September - November

A1Lawn Ultimate Lawn Seaweed Extract

500ml (covers 100m²)

Key benefits:

After fertilising, you can boost lawn health with this liquid seaweed biostimulant. It helps strengthen roots, improves stress and disease resistance, and provides a small top-up of nutrients and trace elements.

How to apply:

Mix 50ml with 2.5L of water to cover 10m².

Apply using a handheld pressure sprayer or watering can with a fine rose head.

Safe to apply every 2 weeks.

Apply from September - November
