

your
A1Lawn
winter pack

Winter can cause a lot of stress on plants, whether it's especially cold, or even just very wet. This pack will help to provide that extra nutrient top up to give it a final boost before spring, as well as provide some extra green up and moss control.

Winter Maintenance Tips

Remove fallen leaves: Fallen leaves will create a canopy which will block sunlight, trap moisture, increase the chances of disease and promote the appearance of moss. Removal of leaves should be done regularly with a rake.

Final mow: Give the lawn one final cut before winter fully sets in. This will remove uneven growth without causing too much stress to the grass.

Limit foot traffic: Walking on your lawn during winter when it is frosty or waterlogged can cause damage to the grass and soil compaction. It is best to avoid doing this.

Monitor for disease: Melting snow can cause risk of disease, along with dew. Gently raking the area can increase airflow and remove morning dew. This will decrease the chance of fungal diseases.

A1Lawn Ultimate Autumn & Winter Lawn Fertiliser

2.5kg (covers up to 100m²)

This fertiliser gives your lawn the nutrients it needs to stay strong and healthy through the colder months.

Key benefits:

High potassium content strengthens roots and stems during autumn and winter.

Added iron supports chlorophyll production, helping your lawn maintain a rich green colour.

How to apply:

Spread evenly at 25-35g/m², ideally using a spreader (hand application is fine if kept even).

Apply before rain so the granules wash into the soil.

If it doesn't rain within 24 hours, water daily until the granules dissolve.

Do not apply to frosty ground - wait until the lawn has fully thawed and dried.

Apply from December - February

Sul-Fe - Iron Sulphate

1kg (covers 500m²)

Key benefits:

Iron sulphate can be used year-round. It helps keep grass a vibrant green and also blackens moss to weaken it.

How to apply:

Mix 50g per 1L of water to treat 25m².

Greening may take longer in colder temperatures.

Do not apply to frosty ground - wait until the lawn has fully thawed and dried.

Apply from December - February
