

Chafer & Leatherjacket Control & Recovery Strategy

ProGreen offers a range of products to tackle chafer and leatherjacket infestations in turf and grassland. These include live nematodes, adult pheromone traps, larval deterrents, grass seed and soil analysis for fast recovery.

The calendar below outlines key timings to achieve best results.

TREATMENT CALENDAR

	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul
CONTROL	Nematodes (100m²/500m² Packs) Nemasys J or C for Chafer or Leatherjacket control using predatory nematodes to control pest larvae										Pheromone Trap (Chafer Only) Uses pheromone lure to attract and trap adult chafer beetle. Organic solution, used to control adults or to give early warning of future problems.	
DETER	Repel 50ml Pack (covers 250m²) Natural, organic, liquid lawn treatment with pest repellent properties, protects the grass plants and roots by creating an environment aborant to larvae. Ensure gap of 3 weeks from any nematode use.											
										Chafer Special 5Kg Pack (covers 200m²) Granular, slow release nitrogen fertiliser, antagonistic to chafer & leatherjacket larvae. Speeds up recovery of damaged lawns and turf		
RECOVER		Grass Reseeding (if required) Choose from fine quality through to hard wearing lawn seeds types							Grass Reseeding (if required) Choose from fine quality through to hard wearing lawn seeds types			
	Lawn/Amenity Turf Soil Analysis Ensure all essential nutrients are present and at the correct level, and receive a bespoke 12 month fertiliser plan to compliment your results. Applying the soil's exact nutrient requirement will help to establish newly lain turf and lawns faster and damaged or distressed lawns recover more quickly.
